4-RUNG PLAYBOOK

The Work-to-System Ladder

Turn the work you already do into proof, lessons and a repeatable system, one rung at a time.

BASED ON YOUR POST OF 20 OCTOBER 2026

I

THE METHOD

Four rungs, in order

Codie Sanchez compressed it into one line: do the work, show the work, teach the work, sell the system. This kit unpacks that line into a sequence you can run every week. The order matters: each rung feeds on the one below it.

01 **Do the work**
Pick one problem you solve again and again for real people. Reps come first: you cannot show, teach or package something you have not done often enough to see the patterns. Write a short log entry after every job.

02 **Show the work**
Publish artifacts, not opinions: a before/after, a screenshot of the process, the checklist you actually used, a mistake and how you fixed it. Only share what you have permission to share.

03 **Teach the work**
When the same question shows up three times, turn the answer into a lesson. Teach the step you just mastered: you still remember what was confusing about it.

04 **Sell the system**
Package what you repeat and what people keep asking about: a template, a checklist, a standard process, a fixed-scope service or a workshop. The system is the work, written down so it runs without improvising.

A rule added by this kit (not in the original post): don't skip rungs. If nobody has seen your work, the system has no proof behind it.

Signals you are ready to climb

- Rung 1 → 2: you have a handful of logged jobs with a clear result.
- Rung 2 → 3: people start asking “how did you do that?”
- Rung 3 → 4: the same lesson keeps getting saved or requested, and you can describe the process as steps.

II

CHECKLIST & TEMPLATE

Weekly ladder checklist

Every week

- [ ] Do: log every job (date, problem, what I did, result, what surprised me).
- [ ] Do: highlight one pattern that repeats in the log.
- [ ] Show: publish 2–3 artifacts from real work, with permission.
- [ ] Show: share one mistake and the fix.
- [ ] Teach: collect the questions people asked this week.
- [ ] Teach: turn the most repeated one into a short lesson (post, one-page checklist or 3-minute video).
- [ ] Sell: add that lesson as a step in your written process (SOP).
- [ ] Sell: ask which part someone could buy as a template, service or workshop.

Work log

DATE	PROBLEM SOLVED	WHAT I DID (STEPS)	RESULT	WHAT SURPRISED ME

System card

FIELD	YOUR ANSWER
Who it is for	
The result it delivers	
Steps (5–9)	
Tools & templates	
What it does NOT include	
Proof you can show	

WORKED EXAMPLE

III A freelance bookkeeper climbs the ladder

FICTIONAL EXAMPLE · MADE-UP DATA

Lena is a fictional freelance bookkeeper who works with small cafés. This is how one cycle of the ladder could look for her.

RUNG	WHAT LENA DOES	ASSET IT LEAVES BEHIND
Do	Closes the monthly books for her café clients and writes a log entry after each close.	A work log where the same three reconciliation errors keep appearing.
Show	Posts an anonymised before/after of a messy month (client approved) and the checklist she used.	Two posts and one screenshot.
Teach	Several owners ask how to avoid those errors, so she writes a 7-step “month-end in one sitting” lesson.	A short thread and a one-page checklist.
Sell	Writes the 7 steps as a standard process and drafts a fixed-scope “month-end setup” service.	An SOP and a draft service page.

Why it works

1. She only teaches what she has logged.
2. Each asset reuses the previous one: log → post → lesson → SOP.
3. The offer is a smaller, clearer version of work she already does.

> Fictional example to show the sequence. No figures, results or earnings are implied.
