TRIBUTE EDITION · UNOFFICIAL

AI SECOND BRAIN

The Meeting-to-Follow-Up Loop

Turn every call into clear tasks and a follow-up written in your own voice, with no paid templates and without ever letting the AI press send.

The 6-step loop · Voice profile worksheet · Pre-send checklist · AI prompt pack

Free kit · Gifted · Not for sale · Original synthesis by Gilbert Cruz · October 2026

THE METHOD

Six steps from call to follow-up

Ruben Hassid shared on X how he uses Claude as a second brain without any paid Notion template: his meeting notes, inbox and chat tools are connected, so the AI can pull the context, list what matters and draft the follow-up in his voice, while he keeps the final say. This kit turns that setup into a tool-agnostic loop for any assistant that can read your notes and email.

Two key terms

Context source: wherever your meeting transcripts and notes live, in one place your assistant can read.

Voice profile: a short set of writing rules distilled from your own sent emails.

STEP 1	**Capture in one place** Record or transcribe calls (with everyone's consent) into a single tool your assistant can access, phone and in-person meetings included.
STEP 2	**Extract without guessing** After each meeting, ask for deadlines, tasks and blockers, and require the AI to flag anything that wasn't said clearly instead of filling the gap.
STEP 3	**Cross-check the past** Compare with earlier meetings with the same person: what changed, what was promised, what slipped through.
STEP 4	**Build your voice profile once** Have the AI study your recent sent emails and write rules: greeting, sign-off, sentence length, pet phrases, words you never use.
STEP 5	**Draft the follow-up** Decisions, action items with owners, one clear next step, as short as you usually write. Saved as a draft, never sent.
STEP 6	**Prep the next call** Before you meet again, ask: what did I promise this person, and what's still open?

> The line Ruben draws: the AI never sends an email on its own. It drafts; **you** review and press send.

WORKSHEET AND CHECKLIST

Your voice profile

Fill it in yourself, or let the AI draft it from your last 30 sent emails and then correct it. Keep it to one page.

Element	Your rules
How I greet	
How I sign off	
Typical sentence length	
Phrases I use a lot	
Words I never use	
Formality (1 = casual, 5 = formal)	
Emoji, exclamation marks?	
Typical email length	

Before you press send

- [ ] Every task has an owner and a date.
- [ ] Nothing was invented: unclear points are marked as questions.
- [ ] It matches my voice profile and sounds like me.
- [ ] There is only one clear next step.
- [ ] Recipients are right (no accidental reply-all).
- [ ] I've read it top to bottom: the AI didn't send it.

WORKED EXAMPLE

One client call, extracted and drafted

FICTIONAL EXAMPLE · INVENTED PEOPLE AND DATA

Sam, a freelance consultant, has a 30-minute call with Laura, a client. Here's what the extraction step returns, with unclear and changed points flagged instead of guessed.

Item	Status	Note
Send revised proposal	Clear	Due Friday · owner: Sam
Client shares Q4 budget	Unclear	Mentioned, no date given → ask in the follow-up
Kick-off workshop	Changed	Last call: November; now "early December?" → confirm
Access to analytics	Blocker	Waiting on the client's IT team

THE DRAFT (IN SAM'S VOICE)

Hi Laura, thanks for today. Quick recap:
· I'll send the revised proposal by Friday.
· Could you let me know when the Q4 budget will be ready?
· Workshop: we said early December. Does the week of the 7th work?
Next step: once IT grants analytics access, I'll start the audit.
Best, Sam

What the loop refused to do

1. It didn't invent a date for the budget: it turned the gap into a question.
2. It didn't treat "early December" as confirmed: it asked.
3. It didn't send anything: the email sits in Drafts until Sam reviews it.

> Fictional example: people, dates and details are invented to illustrate the method. The draft stays a draft until Sam reads and sends it.

PROMPT, CREDIT AND NOTICE

AI prompt (short version)

```
1) EXTRACT: "Open my notes from the last meeting with [name].
List deadlines, tasks (with owners) and blockers. Mark anything
that wasn't said clearly as UNCLEAR. Do not guess."
2) VOICE: "Read my last 30 sent emails. Write my voice profile
as rules: greeting, sign-off, sentence length, go-to phrases,
words I never use."
3) DRAFT: "Using my voice profile, draft the follow-up: decisions,
action items with owners, one next step. Save as a DRAFT only."
4) PREP: "What did I promise [name] last time? What's still open?"
```

Full step-by-step version in prompt.md.

Use it in 30 minutes

1. Pick one recurring meeting and get its transcript into one place your assistant can read.
2. Run prompt 2 (above) once to build your voice profile, then correct it by hand.
3. After the next call, run prompts 1 and 3, and check the draft against page 3 before sending.
